MATT JONES

m.r.jones@live.co.uk ◇ mattjones.wales ◇ LinkedIn ◇ Scotland, UK

PERSONAL SUMMARY

Senior full-stack engineer with 7+ years building products in TypeScript, React, C# and Kotlin on AWS and GCP. Owns system design and delivery across the stack. Practises XP: pairing, TDD and small user-focused iterations. Mentors engineers and leads technical interviews.

SKILLS

Languages: TypeScript, C#, Kotlin, Java, Python
Frameworks: React, Next.js, Svelte/SvelteKit, .NET/ASP.NET Core, Spring Boot, Node.js
Infrastructure: AWS, GCP, Kubernetes, Docker, Terraform, GitHub Actions, CloudWatch, Grafana, Prometheus
Data: PostgreSQL, DynamoDB, MongoDB, Snowflake, Elasticsearch
Testing: Vitest, Jest, Playwright, Cypress, JUnit

EXPERIENCE

Seatfrog, *Full Stack Engineer*, Remote — Apr 2025 – Present · 1 year 7 months

Working in a team of around 20 engineers at a rail-tech scale-up, building auction and payment systems for 160k monthly active users across UK rail operators.
C#, .NET, TypeScript, React, AWS (Lambda, ECS), DynamoDB, PostgreSQL, Snowflake

- Owned Seatfrog Intelligence from system design to production, giving rail operators self-service revenue and capacity analysis by route and a Claude chatbot for querying rail data. Designed the MCP layer and pre-warmed insight cache in Valkey, cutting insight load times from around 10s to 50ms.
- Opened a new affiliate sales channel by taking a guest-checkout portal from scope to production in seven weeks, spanning AWS infrastructure, backend APIs, React checkout and revenue-attribution analytics.
- Delivered Apple/Google Pay across five web apps and Apple/Google Wallet passes for upgrades. Wallet payments rose from 18% to 39% of transactions in the launch month and now exceed 50%.
- Ported and deployed a bid optimisation algorithm from Python to C# with the data science team. Parallel evaluation across 143k auctions showed a 7% lift in predicted auction revenue.
- Defined a staged migration strategy from custom JWT auth to Clerk for 2m users, covering provider evaluation, bulk migration, GDPR edge cases and dual JWT verification to preserve existing sessions.
- Drove process change across the team by moving from solo project ownership to two engineers per project, breaking down knowledge silos and raising the standard of collaboration and code review.

Career Break — Dec 2022 – Apr 2025 · 2 years 5 months

Took time out to travel, including a 1,300km hike along New Zealand's Te Araroa.

Boclips, London/Remote — Nov 2018 – Dec 2022 · 4 years 2 months

Tech Lead, Oct 2022 – Dec 2022 · 3 months
Senior Full Stack Engineer, Aug 2020 – Oct 2022 · 2 years 3 months
Full Stack Engineer, Nov 2018 – Aug 2020 · 1 year 10 months

Built a media platform with 2m+ video assets in an XP team at an ed-tech startup.
Kotlin, Spring Boot, TypeScript, React, Kubernetes, GCP, Elasticsearch

- Owned technical direction for roadmap items as Tech Lead, working with the PM and Engineering Lead to define scope, identify risks and guide architectural decisions.
- Owned frontend architecture for the team, modernising legacy React with hooks and replacing Redux with React Query.

- Led the rewrite of a legacy React/Node.js frontend with the PM and UX designers, introducing a new design system and microservice-backed API and achieving WCAG 2.0 Level AA conformance. Migrated all customers to it and retired the old system.
- Built an internal order management tool with the operations team, replacing manual spreadsheets with B2B order tracking and partner manifest generation.
- Reduced the initial JavaScript bundle from several MB to under 250KB through code splitting and lazy loading.
- Managed a junior engineer, mentored others through pairing and led 30+ technical interviews.
- Organised and facilitated the team's Lunch and Learn sessions. Presented sessions that raised accessibility testing and CSS standards.
- Facilitated team and company-wide retrospectives that changed how the team planned and shipped work.

Hawk-Eye Innovations, *Software Engineer*, Remote Oct 2017 – Jun 2018 · 9 months

Developed real-time broadcast graphics and web applications in the SMARTData team.
Java, Spring Boot, HTML5, React, TypeScript

- Optimised an HTML5 data-driven broadcast graphics engine for FIVB's Volleyball Nations League.
- Enhanced an interactive timeline for use alongside Hawk-Eye's core replay software.

Hawk-Eye Innovations, *Software Engineer (Placement)* Jun 2015 – Aug 2016 · 1 year 3 months

Built features in Hawk-Eye's replay technology team for projects supporting major sporting events.

EDUCATION

BSc (Hons) Computer Science with Placement Year, 2:1
University of Bath, 2013 – 2017
